

SETH B. DARLING

Scientist, Nanoscience & Technology Division, Argonne National Laboratory
Fellow, Institute for Molecular Engineering, Univ. of Chicago

Solar energy

- Next-generation photovoltaic materials and technologies
- Life cycle assessment (LCA)

Water

- Advanced membrane technologies
- Pollution remediation (oil spills, nitrate reduction)
- Fluid-fluid separations

Hybrid materials

- Sequential infiltration synthesis (SIS) can grow inorganic materials within polymeric materials
- Applications in lithography, energy conversion/storage, membranes, and beyond
